Sprint-2 Goals

Base Goals:

1. Working on deployment of the server on AWS EC2.
2. Write Java classes for users, groups and messages in the application.
3. Integrate an authentication mechanism for users to login to the service.
4. Design a server architecture that allows for scalability.
5. Modify the application from working as a chat room to a one to one messaging service to start off.
6. Integrate a logger to log application events.

Stretch goal:

1. Delete sent messages in one to one chat.
